Zoom meeting link will be sent to participants
after registration is complete.

Introduction to:

Scene Assessment
Hazard Identification
Scene Management
Structural markings
Resource ID
Case Study examples
Q&A opportunity
Plus More!

This 1-hour introduction to compromised structure webinar is geared towards animal welfare professionals for understanding basic operations upon arrival at a structural collapse or a potentially compromised building. It is important that rescue personnel can identify hazards they may face and how to mitigate those hazards. Lessons learned will include initial scene size-up, how to establish search and rescue priorities. Whether the incident is caused by Hurricane, Tornado, Earthquake, or encountered in your daily duties, the after affects are similar and so are the immediate actions required by first responders. Students will learn scene size-up and response considerations along with shoring considerations. Attendees will also be introduced to Search, Victim and Structural markings; and search techniques to provide rapid and safe clearing of areas and reduce duplication of efforts. Case study reviews will also address how to integrate into the Incident Management System from the early
