The Exotic Technical Animal Rescue Training is essential for exotic facility staff, zoo Veterinarians, and fire department heavy rescue teams. Incidents that involve large exotic animals require special considerations and training. EAST heavy rescue training provides low angle rope rescue training with raising and lowering sling applications using HAST XXL equipment. This training is a basic requirement for rescue team members for both in-house response teams and Ride-out disaster response and support resources. This class is two days and can focus on one or multiple species applications. **This training is limited to zoo or other exotic animal facility partner personnel.** Participants will need to state agency of affiliation at the time of registration. Lunch will be provided each day.
